Nasjonalt kunnskapssenter for helsetjenesten fremskaffer og formidler kunnskap om effekt av metoder, virkemidler og tiltak og om kvalitet innen alle deler av helsetjenesten. Målet er å bidra til gode beslutninger slik at brukerne får best mulig helse- og velferdstjenester. Kunnskapsenteret er formelt et forvaltningsorgan under Helsedirektoratet, men har ingen myndighetsfunksjoner og kan ikke instrueres i faglige spørsmål.

Nasjonalt kunnskapssenter for helsetjenesten
Oslo, mai 2014

Hovedfunn

Seksjon for velferdstjenester ved Nasjonalt kunnskapssenter for helsetjenesten fikk i oppdrag av Politidirektoratet og Integrerings- og mangfoldsdirektoratet (IMDi) å utføre et systematisk litteratursøk med påfølgende sortering av mulig relevante studier. Oppdraget var å identifisere empiriske studier som undersøker effekten av og erfaringer med tiltak som har til hensikt å forebygge radikalisering, fortrinnsvis blant ungdom.

Metode

Vi utarbeidet en søkestrategi for et systematisk litteratursøk for å identifisere studier som har undersøkt effekt av og erfaringer med tiltak som har til hensikt å forebygge radikalisering. Det ble søkt i medisinske og sosialfaglige databaser etter empiriske studier med alle typer forskningsdesign. Søket ble gjennomført i mars 2014.

Resultater

- Søket resulterte i totalt 13511 referanser. Av disse ble 18 studier vurdert som mulig relevante i henhold til inklusjonskriteriene.
- Vi identifiserte to mulig relevante systematiske oversikter om tiltak mot religiøs radikalisering.
- Vi identifiserte to kontrollerte studier (en RCT og en ikke-randomisert kontrollert studie). Disse studiene undersøkte effekten av å fremme offerbevissthet og kunnskap om menneskerettigheter, og effekten av opplæring i å bedre relasjonen mellom ulike (kulturelle) grupper.
- Vi identifiserte åtte kvalitative studier som utforsket erfaringer med ulike forebyggende tiltak mot radikalisering.
- De øvrige studiene hadde case-studie design, mixed methods design eller hadde uklare studiedesign.

Vi har identifisert kun to små kontrollerte studier som målte effekt av to ulike forebyggende tiltak mot radikalisering. Det foreligger dermed ikke noe empirisk grunnlag for å utarbeide en systematisk oversikt om effekt av forebyggende tiltak mot radikalisering.

Når ble litteratursøket utført?

Søk etter studier ble avsluttet mars 2014.

Key messages

The National Police Directorate and the Directorate of Integration and Diversity commissioned a systematic search from The Social Research Unit at the Norwegian Knowledge Centre for the Health Services. The aim was to identify studies that investigated effects of and experiences with interventions that aimed at preventing radicalization, primarily among youth.

Methods

We conducted a systematic search for empirical studies, employing any kind of study design, on effect of or experiences with interventions aimed at preventing radicalisation. We searched in medical and social science databases. The search was conducted in March 2014.

Results

- We identified 13511 references in total. Among these, we considered 18 to be relevant according to the inclusion criteria.
- We identified two potentially relevant systematic reviews about religious radicalisation.
- We identified two controlled studies (one RCT and one non-randomised controlled study). These studies investigated the effect of an educational intervention designed to improve inter-group relations, and the effect of a program designed to increase sensitivity to victims and promote respect for human rights.
- We identified eight qualitative studies that explored experiences with different preventive interventions against radicalism.
- The other studies were a case-study, had mixed methods design or had unclear designs.

As we identified only two small controlled studies that measured the effect of two different interventions, there is at present no empirical fundament to make a systematic review about effect of such interventions.

Title:
Preventing ideological radicalization

Type of publication:
Systematic reference list

A systematic reference list is the result of a search for relevant literature according to a specific search strategy. The references resulting from the search are then grouped and presented with their abstracts.

Doesn't answer everything:

- No critical evaluation of study quality
- No analysis or synthesis of the studies
- No recommendations

Forord

Politidirektoratet og Integrerings- og mangfoldsdirektoratet har bestilt et systematisk litteratursøk med sortering for å identifisere studier som undersøker effekt av og erfaringer med intervensjoner som har til hensikt å forebygge rekruttering til radikaliserte miljøer og å forebygge radikaliserte handlinger, fortrinnsvis blant ungdom.

Prosjektgruppen har bestått av:

- Sissel Johansen, forsker, Nasjonalt Kunnskapssenter for helsetjenesten
- Sabine Wollscheid, forsker, Nasjonalt Kunnskapssenter for helsetjenesten
- Victoria Ingrid Einagel, forsker, Nasjonalt Kunnskapssenter for helsetjenesten

Innledning

Bakgrunn

Fenomenet radikalisering har i de senere årene fått økt oppmerksomhet i det norske mediebildet. Radikalisering kan defineres som en prosess med økende aksept for bruk av vold for å oppnå politiske mål. Det alvorligste eksempelet på dette i Norge skjedde med bakgrunn i høyreekstrem ideologi den 22. juli 2011. Utvikling av ekstreme holdninger og vilje til å utøve vold blant enkeltindivider finner man i en rekke miljøer i en internasjonal sammenheng: I følge Europol er radikaliserte separatistgrupper (baskere, nordirer), anarkister, dyrevernaktivister og høyre-ekstreme de mest framtredende når det gjelder voldelige angrep i Europa (1). Til sammenlikning var bare ett av til sammen 294 angrep i Europa i 2009 utført av radikaliserte islamister (1).

Regjeringen skal i 2014 levere en handlingsplan mot radikalisering og voldelig ekstremisme i arbeidet med å forebygge at unge mennesker utvikler ekstreme holdninger og knytter seg til radikaliserte miljøer. Justisministeren går inn for at forebyggingen skal skje på et bredt felt, der både politi, skole, kommune, foreldre og nærmiljø er involvert (2).

Definisjoner

Radikalisering kan defineres som en prosess der en person i økende grad aksepterer bruk av vold for å nå sine politiske mål (3). Radikalisering kan lede til terrorhandlinger. I sikkerhetsloven defineres terrorhandlinger som: "ulovlig bruk av, eller trussel om bruk av, makt eller vold mot personer og eiendom, i et forsøk på å legge press på landets myndigheter eller befolkning eller samfunnet for øvrig for å oppnå politiske, religiøse eller ideologiske mål" (4). Politiets sikkerhetstjeneste prioriterer fire grupper som representerer en trussel mht. politisk motivert vold i Norge; ekstreme islamistiske miljøer, høyre-ekstreme miljøer; antiislamske miljøer; og venstreekstreme/autonome miljøer (4).

Styrker og svakheter ved litteratursøk med sortering

Ved systematiske litteratursøk med sortering går man gjennom søkeresultatet for å identifisere relevante publikasjoner for problemstillingen. Dette gjøres basert på tittel og eventuelt sammendrag. Artiklene innhentes ikke i fulltekst. Det betyr at vi kan ha inkludert titler som kan vise seg ikke å være relevante ved gjennomlesning av fulltekst. Det gjør også at vi kan ha mistet relevante publikasjoner pga. manglende informasjon i sammendragene. Vi benytter kun bibliografiske databaser, samt søk etter grå litteratur i bl.a. Google, for å identifisere litteratur. Vi kan derfor ha gått glipp av potensielt relevante studier som man kan finne ved søk i referanselister eller kontakt med eksperter på fagfeltet.

I et litteratursøk med sortering gjennomføres ingen kvalitetsvurdering av artiklene. Ved en full forskningsoppsummering ville vi ha innhentet artiklene i fulltekst for endelig vurdering opp mot inklusjonskritene. Inkluderte studier ville i tillegg blitt vurdert for vitenskapelig/metodisk kvalitet, og resultatene ville blitt sammenstilt og diskutert.

En styrke ved systematiske litteratursøk med sortering er imidlertid at det gir et bilde av forskningslitteraturen som kan peke på områder med manglende kunnskap (få empiriske studier) eller områder hvor tilfanget av forskning er rikelig, og hvor det er behov for en systematisk oversikt.

Problemstilling

Problemstillingen var å identifisere studier som har undersøkt effekt av og erfaringer med tiltak som har til hensikt å forebygge radikalisering.

Metode

Litteratursøk

Vi søkte systematisk etter studier og systematiske oversikter i følgende databaser:

- Bibsys
- Campbell Library
- Cochrane Library (alle databaser)
- DARE
- ERIC
- ISI Science/Social Science Citation Index
- PsycINFO
- Medline
- Google scholar
- Open Sigle – System for Information on Grey Literature in Europe
- SSRN – Social Science Research Network e-library
- Social Care online
- Sociological abstracts
- BRÅ
- NCJRS (National Criminal Justice Reference Center)
- Google Scholar

Søket ble avsluttet i mars 2014.

Begrunnelse for valg av søkestrategi

Prosjektleder planla en søkestrategi i samarbeid med forskningsbibliotekar. Forskningsbibliotekaren utførte søket i samtlige databaser. Den fullstendige søkestrategien finnes i vedlegg 1. Søket er gjort for hele tidsperioden databasene dekker bakover i tid.

Inklusjonskriterier

Populasjon: Den generelle befolkning, ingen begrensning på alder (men spesielt unge mennesker) eller ideologisk tilhørighet.

Tiltak: Alle typer tiltak som har til hensikt å forebygge *rekruttering* til radikaliserte grupper; *oppbygging* av radikaliserte miljøer; radikaliserte *voldsytringer og -handlinger*.

Sammenlikning: Alle.

Utfall: Radikaliserte voldsytringer og -handlinger, tilhørighet til radikaliserte miljøer/ideologier.

Studiedesign Ingen begrensning på studiedesign.

Språk: Ikke presisert

Artikkellutvelgning

Forskerne gikk parvis gjennom alle titler og sammendrag for å vurdere relevans i henhold til inklusjonskriteriene. Vurderingene ble utført uavhengig av hverandre. Inklusjon eller eksklusjon ble avgjort ved konsensus.

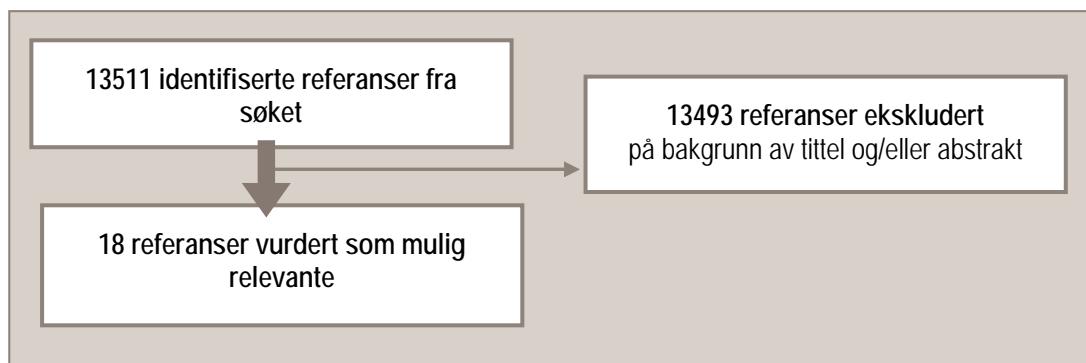

Utvelsing av litteratur var kun basert på tittel og sammendrag. Vi har ikke innhentet eller lest artiklene i fulltekst.

Resultat

Resultat av søkeret

Søket resulterte i 13511 referanser. Vi vurderte 18 referanser til å være mulig relevante i henhold til inklusjonskriteriene.

Figur 1. Flytskjema over identifisert litteratur

Vi fant relativt få studier som empirisk har undersøkt effekt av eller erfaring med forebyggende tiltak mot ideologisk radikalisering. Dette bekreftes i den ene oversiktssartikkelen vi fant som peker på at det meste av forskningen innen feltet har fokusert på terrorisme framfor radikaliseringss prosessene som kommer forut for terrorhandlinger (Christmann, 2012).

Tre av de inkluderte publikasjonene er oversiktsrapporter, hvorav to er oppgitt å være systematiske oversikter (Christmann, 2012; Pratchett et al., 2010). Christmanns (2012) oversikt er avgrenset til å omhandle evalueringer utført i England, og kun av tiltak som skal forebygge «Al Qa'ida-påvirket radikalisme» (s. 6 (ibid.)). Kun to kvalitative evalueringer er inkludert i oversikten. I den andre oversiktsrapporten (Pratchett et al. 2010) oppgir forfatterne at de har inkludert 18 evalueringer av tiltak som skal forebygge religiøs radikalisme. Noen av de inkluderte evalueringene var kvalitative, andre var teoretiske (ikke empiriske studier). Forfatterne kunne dermed ikke konkludere på effekt av tiltakene.

I de 15 primærstudiene vi har inkludert har man undersøkt effekt av/erfaringer med:

- Kurs/opplæring i konflikthåndtering; multikulturalisme; relasjonsbygging mellom grupper (n=3)
- Terapi (n=1)
- Tiltak for å fremme offerbevissthet og kunnskap om menneskerettigheter (n=1)
- Mobilisering mot rasisme i lokalsamfunnet (n=1)
- Politi-tiltak (n=3)
- Ikke oppgitt type tiltak (i sammendraget) (n=6)

Resultat av sorteringen

De mulig relevante publikasjonene er sortert etter type studiedesign i tabell 1, og deretter sortert etter type tiltak. Til sist er de inkluderte referansene sortert etter type studiedesign.

Tabell 1: Antall studier sortert etter studiedesign

Studiedesign	18 studier
Oversiktssråpporter	3

Ikke oppgitt/uklart studiedesign	2

Studier sortert etter type tiltak

Oversiktssråpporter

1. Christmann, K. (2012). **Preventing Religious Radicalisation and Violent Extremism. A Systematic Review of the Research Evidence**, Youth Justice Board for England and Wales

The purpose of this systematic review is to examine the scholarly literature on

the process(es) of radicalisation, particularly among young people, and the availability of interventions to prevent extremism. The review was undertaken to inform the national evaluation of the Youth Justice Board for England and Wales' (YJB) preventing violent extremism programmes within the youth justice system, and as such, represents one of the research outputs from that study. The full evaluation report, Process Evaluation of Preventing Violent Extremism Programmes for Young People, is to be published by the YJB alongside this review. The review found that the evidence base for effective preventing violent extremism interventions is very limited. Despite a prolific output of research, few studies contained empirical data or systematic data analysis.

Furthermore, although a growing body of literature investigating the radicalisation process is emerging, the weight of that literature is focused upon terrorism rather than radicalisation. As such, the evidence is concerned with that smaller cohort of individuals who, once radicalised, go on to commit acts of violence in the pursuit of political or religious aims and objectives. This introduces a systematic bias in the literature, away from the radicalisation process that precedes terrorism, including radicalisation that does not lead to violence. Despite these limitations, the systematic review found that Islamic radicalisation and terrorism emanate from a very heterogeneous population that varies markedly in terms of education, family background, socio-economic status and income. Several studies have identified potential risk factors for radicalisation, and, among these, political grievances (notably reaction to Western foreign policy) have a prominent role. The review found only two evaluated UK programmes that explicitly aimed to address Islamic radicalisation in the UK. These were outreach and engagement projects running in London: the Muslim Contact Unit (MCU) and the 'Street' Project. In addition, the review drew heavily upon the Department for Communities and Local Government's (DCLG) rapid evidence assessment, Preventing Support for Violent Extremism through Community Interventions: A Review of the Evidence (Pratchett et al, 2010). This advocated the adoption of capacity building and empowering young people, and interventions that "challenge ideology that focus on theology and use education/training". The Netherlands-based Slotervaart Project was identified as an exemplar of the outreach/community-based approach recommended by the DCLG review. The review also considered a number of de-radicalisation programmes operating in several Islamic countries and programmes tackling right-wing radicalisation. These programmes provide some potential learning points for future UK programmes, chiefly around the need for those engaging with radicalised individuals to carry authority and legitimacy, and to be equipped with profound ideological knowledge.

2. Pratchett, L., Thorp, L., Wingfield, M., Lowndes, V., Jabbar, R. (2010).
Preventing support for violent extremism through community interventions: a review of the evidence: rapid evidence

Over the last few years there have been a wide range of interventions aimed at reducing support for violent extremism. This report, the product of a rapid evidence assessment (REA), focuses on those interventions which seek to prevent violent extremism, or reduce support for it, at the community level. The REA looked at a wide range of databases, both nationally and internationally, to find evidenced, evaluated interventions which had been intended to change attitudes towards violent extremism. Following on from an earlier report which mapped the evidence base on community level interventions aimed at preventing violent extremism, this report analyses specific interventions to identify which were most effective at preventing support for violent extremism in the name of religion, in what ways and with which population groups. The report discusses interventions in terms of: young people; women; and community.

3. Thomas, T. (2011) **Youth, Multiculturalism and Community Cohesion**

Since the 2001 'race riots' in the north of England, and the 7/7 London bombings, Britain has appeared to reject multiculturalism. It has instead prioritized a new policy of 'Community Cohesion' that calls for a focus on common needs and shared British identity, rather than on ethnic and religious differences. This has proved a controversial agenda, apparently downplaying the reality of racism and ethnic diversity, and leading to one critic calling it 'the death of multiculturalism'. Little evidence has emerged so far on what Community Cohesion actually represents, but this book addresses that deficit by drawing on empirical research around work with young people to analyse the meaning and practice of British Community Cohesion policies, youth identities in racially-tense areas, and government's attempts to 'prevent violent extremism' amongst young Muslims. It concludes that Community Cohesion is a new phase of multiculturalism, not its death.

Kurs/opplæring i konflikthåndtering; multikulturalisme; relasjonsbygging mellom grupper

1. Amjad, N., Wood, A.M. (2009). **Identifying and changing the normative beliefs about aggression which lead young Muslim adults to join extremist anti-Semitic groups in Pakistan.** Aggress Behav. 35:514-9.

Abstract: Two studies investigated the role of beliefs about the acceptability of ag-

gression ("normative beliefs") against Jews in determining who would join an extremist group. In Study 1, students in a university in Pakistan ($N=144$) completed self-report attitude measures, and were subsequently approached by a confederate who asked whether they wanted to join an extremist anti-Semitic organization. Normative beliefs about aggression against Jews were very strong predictors of whether participants agreed to join. In Study 2, participants ($N=92$) were experimentally assigned to either a brief educational intervention, designed to improve inter-group relations, or to a control group. They also filled in self-report attitude measures pre and post intervention. Participants in the intervention group were much less likely to agree to join the extremist group, and this effect of the intervention on joining was mediated by changes in normative beliefs about aggression against Jews. The results have implications for theories of inter-group aggression and interventions to prevent people from being recruited into extremist groups

2. St. Jean, G. (2007) **Evaluation of intervention programs designed to address high school racial conflicts.** Dissertation Abstracts International Section A: Humanities and Social Sciences. Vol.68 (10-A), pp. 4493.

Abstract: This dissertation research examines racial conflict-one of the contributors to school violence-and effective intervention programs. This dissertation study presents research- and theory-based integrated intervention programs (a synthesized program with conflict resolution and multicultural components) as an effective resolution to high school racial conflicts. Some schools in the United States have created a database that lists effective intervention programs for specific school problems, but most of the programs only deal with general violence and violence related to substance abuse-none identify effective approaches to racial conflicts at schools. This dissertation research is a unique first step to look at effective techniques and identify appropriate programs to deal with racial conflicts to these databases. It tests the following hypotheses: (1) Educational intervention programs that encompass assimilated multicultural and conflict resolution training contents (integrated programs) in its integrated lessons are more effective at impacting the reduction of racial incidents at high schools. (2) High schools that do not utilize intervention programs with a combination of multicultural and conflict resolution training contents but only rely on strict policies and practices (e.g., laws and rigid discipline) are most effective at reducing the number of racial incidents in high schools. Lastly, the dissertation study describes the development of a model that schools can use to assess their needs and determine steps to implement a suitable intervention program. This research project is a summative evaluation study that uses multiple methods (survey, experiment, and case study) and encompasses a selection of high schools in Pennsylvania that meet the criteria of the study. Principals, teachers, and parents from selected schools are the key participants in the study. (PsycINFO Database Record (c) 2012 APA, all rights reserved)

3. Cifuentes, R., Whittaker, G.R., Lake, L. (2013). **The Think Project: An Approach to Addressing Racism and Far-Right Extremism in Swansea, South Wales.** 9:304-25.

Abstract: The Think Project is a grassroots project initiated by the Ethnic Youth Support Team in Swansea, South Wales to provide a response for preventing far-right extremism. The project was designed to offer disengaged young people the opportunity to take part in a program of workshops, where the facts about race, religion, and migration are explored. This article discusses the results and the opportunities of the initial pilot project and will give a Welsh perspective on the implications for policy and practice in terms of community cohesion and fulfilling the UK government's PREVENT agendas. Adapted from the source document

Terapi

1. Shoshan, N. (2009). **Reclaiming Germany: Young right extremists, the return of the nation, and the state of politics on the streets of East Berlin.** 69:4388.

Abstract: This dissertation explores the place of young right extremist street milieus in East Berlin within the resurgence of the national question in post-reunification Germany. I examine how right extremists articulate and navigate the intersection of a hegemonic project to rehabilitate the German nation by domesticating its specters on the one hand, and the onslaught of post-Fordist neoliberal politics on the other. In doing so, I argue, they perform a crucial role in enabling the hegemonic refashioning of the nation while at the same time inscribing themselves at the kernel of this project, thus spelling its inexorable incompleteness. My inquiry is based on sixteen months of fieldwork with social cliques of young right extremists on the streets of southeast Berlin, facilitated through a team of street social workers. The dissertation intertwines an ethnographic investigation of right extremist groups with an analysis of the wider context within which their quotidian politics are embedded: the post-Cold War predicaments of German nationalism, the fight against racism and neo-Nazism, and neoliberal reconfigurations in political idioms and practices. I reflect upon the salient role of the neo-Nazi menace in mediating the dialectic between easterners and westerners in the wake of reunification, and upon the manners in which my subjects imagine, experience, and navigate the topographies of a multiethnic city. I show how their xenophobic politics in fact mimic and reproduce mainstream idioms on alterity in Germany and Europe more broadly. I interrogate the relation between the state and its neo-Nazi enemies by looking at the legal regimes, disciplinary mechanisms, and techniques of surveillance that govern right extremist

"things." I then explore the prolific field of therapeutic methods aimed to rehabilitate right extremists and of preventive strategies that seek to inoculate the nation against them. Finally, I examine the politics of place, violence, and visibility that define the struggle between the "good" nation and the "illicit" nation. (PsycINFO Database Record (c) 2012 APA, all rights reserved)

Tiltak for å fremme offerbevissthet og kunnskap om menneskerettigheter

1. Garaigordobil, M. (2012). **Evaluation of a program to prevent political violence in the Basque conflict: effects on the capacity of empathy, anger management and the definition of peace.** Gac Sanit 26:211-6.

Abstract: OBJECTIVE: To assess the effects of a program for the prevention of political violence on empathy, expression of feelings of anger, and the capacity to define peace-violence. METHOD: This study used a quasi-experimental design with pre-test-posttest repeated measures and a control group. The sample comprised 276 adolescents aged between 15 and 17 years (191 in the experimental group, 85 in the control group; 127 boys and 149 girls). A battery of three assessment instruments was administered before and after the intervention. The aim of the program was to increase sensitivity to the victims of political violence, promote respect for human rights, and prevent violence. The intervention consisted of 10 sessions over 3 months. RESULTS: MANOVA analyses revealed that the program increased participants' capacity of empathy (perspective-taking), anger control in annoying situations, and capacity to define peace-violence. CONCLUSIONS: This study has practical educational implications and provides an intervention tool that enhances the development of personality during adolescence and may have a preventive effect on violent behavior. Mobilisering mot rasisme i lokalsamfunnet

1. Rabrenovic, G. (2007). **When hate comes to town: Community response to violence against immigrants.** 51:349-60.

Abstract: During the 1990s, many recently arrived immigrants and refugees in search of secure and stable places to raise their families moved to smaller, mostly homogenous American cities and towns. In these smaller communities, a lack of experience with ethnic and racial minorities along with the fear-provoking impact of 9/11 gave racial supremacists an opportunity to expand their membership base by promoting racial hatred and fears across these communities. This research examines

response to hate provocation in one small New England city and shows how a community can successfully organize against racial hostilities and prevent violence. The results of the research suggest that racial violence is more likely to erupt if there is no community-wide response to racial provocations and also that the media can play an important role in countering hate messages by presenting truthful information and covering issues fairly. (PsycINFO Database Record (c) 2012 APA, all rights reserved) (journal abstract)

Politi-tiltak

1. Parmar, A. **Stop and search in London: Counter-terrorist or counter-productive?** 2011;21:369-82.

Abstract: The principle of 'reasonable suspicion' aims to prevent the abuse of the police power to stop, search and arrest and to increase accountability. The lack of a 'reasonable suspicion' requirement in stop and search under Section 44 of the Terrorism Act 2000 generated controversy and demands for legislative reform. Questions were raised about whether counter-terrorist policing efforts under s44 were effective of merely compromising civil liberties and sanctioning 'ethnic profiling'.

Drawing on observations of stop and search operations, interviews with police and people in London, this paper examines the implementation, experience and perception of s44 from the perspective of police and policed. The paper contends that the spectre of terrorism has legitimated unfair policing-both conceptually and practically-and ethnic minority communities have become suspect and potential intelligence sources. This is inherently problematic, generating a binary framework of expectations which are intangible and contradictory in pursuing human security. Ethnic minority communities have been criminalised, reified in reference to their religious backgrounds, and intra-ethnic tensions and ambiguities have deepened.

(PsycINFO Database Record (c) 2012 APA, all rights reserved) (journal abstract)

2. Ramirez, D.A., Quinland, T.A. (2008). **The Greater London Experience: Essential Lessons Learned in Law Enforcement-Community Partnerships and Terrorism Prevention.**

Abstract:

British law enforcement is far ahead of the United States both in thinking creatively about building bridges to its Muslim communities and implementing community policing programs that produce constructive interactions between these communities and various branches of law enforcement.

Because they began their efforts well before the July 7, 2005 London bombings, British law enforcement was able to see firsthand how their connections with the Muslim community, particularly in the Bradford/Leeds area of England, helped

them quickly identify the bombers and develop leads that were critical to their investigation. In the wake of those bombings, British law enforcement has worked even harder to expand their community policing efforts with their Muslim communities.

These efforts have proven fruitful on multiple fronts, including in August 2006, when a tip from the Muslim community helped British police thwart a terrorist plot to detonate bombs on international flights departing from London's Heathrow Airport.

In short, British law enforcement is far ahead of our own in connecting with Muslim communities, even though Muslim communities in Great Britain are significantly less prosperous and more alienated from the mainstream than Muslim communities in the United States. The premise of this paper is that we have much to learn from what they have begun.

1. Lakhani, S. (2012). **Preventing Violent Extremism: Perceptions of Policy From Grassroots and Communities**, *Howard Journal of Criminal Justice*, 51:190-206.

Abstract: This article examines the implementation of the UK's 'Prevent Strategy' for countering terrorist risks and threats. Informed by qualitative data, it critically assesses the perception and reception 'on the ground' of Prevent Strategy policies amongst those individuals who are, in many ways, the focus of such interventions. It is found that there are a number of grievances held, though three are of particular concern and revolve around funding issues, confusion of the overarching aims of the strategy, and suspicions of intelligence gathering and spying within Muslim communities. (Published Abstract)

2. Choudhury, T., Fenwick, H. (2011). **The impact of counter-terrorism measures on muslim communities**. *International Review of Law, Computers and Technology*, 25:151-181.

Abstract: Concerns have been raised that counter-terrorism laws and policies are increasingly alienating Muslims, especially young people and students, and that counter-terrorism measures may themselves feed and sustain terrorism. This paper relies on extracts from a report on this issue commissioned by the Equality and Human Rights Commission to develop and deepen understanding of the impact of counter-terrorism legislation and policies in general, and on Muslim communities in particular. Building on existing studies, this report contributes to the research and wider public discussion of this matter through an examination of the experiences of counter-terrorism legislation and policies on Muslim communities in four local areas across Britain and interviews with practitioners and officials at a national and local level. The areas focused on relate in particular to various uses of technology to further counter-terror strategies and the reaction to them of those interviewed.

3. Awan, I. (2012) **Muslim communities, conflict and terrorism: a study of Alum Rock.** Safer Communities, Vol. 11 Iss: 4, pp.195 - 204

Purpose – The purpose of this paper is to examine the current UK Prevent Agenda 2011 and the possible threat to local communities from such policies which may actually fuel further resentment and make communities less safe and more susceptible to radicalisation and extremism.

Design/methodology/approach – The paper presents a short qualitative study that involved members of the Alum Rock community in Birmingham (UK) that had experience of Prevent strategies. The study involved semi-structured interviews which were conducted with Muslim community members who were involved either directly or indirectly with Prevent programmes in the area of Alum Rock.

Findings – The study found that overall Muslim communities within Alum Rock were suspicious of the role of law enforcement agencies and counter-terrorism policies such as Prevent.

Research limitations/implications – In a short qualitative study and with a small sample size there is clearly a need to do further research and deal with a larger sample size that would demonstrate a more representative view of the community.

Practical implications – This study can help inform and improve the counter-terrorism policy framework which includes Prevent. For example, more emphasis is needed on getting views from Muslim communities through focus groups and interviews which could in turn help build trust between Muslim communities and law enforcement agencies.

Originality/value – There is currently little research on the Prevent Agenda 2011 and the present paper provides an important contribution in understanding the views of Muslim communities in an area which has been the subject of a number of

high profile counter-terrorism operations (for example, Operation Gamble involved a number of police raids aimed at foiling a plot to behead a Muslim soldier), Project Champion (where West Midlands police used overt and covert surveillance (CCTV) cameras in predominantly Muslim areas). The data collected could be used as a template for gaining a better understanding of how Muslims feel about Prevent and as such can improve relations between Muslim communities and the police.

4. Lindekilde, L. (2012). **Neo-liberal Governing of "Radicals": Danish Radicalization Prevention Policies and Potential Iatrogenic Effects.** 6:110-25.

Abstract: The Danish government's counter-radicalization Action Plan of 2009 had intended and unintended effects. Primarily targeting Danish Muslims, it employs neoliberal governmentality approaches of governance through individual support and response, information and knowledge, empowerment, surveillance and intervention, and anti-discrimination. It aims to prevent radicalization by transforming, shaping, and disciplining illiberal and violence-prone "radicals" into active, liberal citizens. Prolonged fieldwork and in-depth interviews with seventeen Muslims from a targeted milieu reveal skepticism about the effectiveness of the measures. Implementation of the action plan in practice may yield iatrogenic effects

5. Demant, F., De Graaf, B. **How to counter radical narratives: Dutch deradicalization policy in the case of Moluccan and Islamic radicals.** 2010;33:408-28.

Abstract: This article deals with the role of government in encouraging the decline of radical movements. The question posed is: "Which story can the government tell to encourage the decline of radical groups and the disengagement of their members?" The article makes use of the survey of factors promoting decline and disengagement drawn up by Demant, Slootman, Buijs (+) and Tillie in 2008, as well as the factor "official policy strategies" based on concepts taken from discourse analysis, adapted to counterterrorism and deradicalization strategies by De Graaf in 2009. The article will therefore not address the different practical measures in this field, but focus instead on the perception of these official measures by the radicals. It will illustrate this with two case studies: the deradicalization of South Moluccan youths in the 1970s and of jihadist radicals after 2001, both in the Netherlands.
